

Port Orford Cedar is a beautiful light color cedar product found in the Pacific Coastal Mountains in Southwestern Oregon and Northern California. Port Orford Cedar has smooth fine grain and natural oils that give it an attractive appearance. It's well known to be some of the strongest cedar boards on the market with strength values similar to Douglas Fir. Compared to Western Red Cedar, Port Orford Cedar is a lot denser which will help it from scratching or denting over time. At Disdero we stock the Port Orford Cedar in 2x6 KD S4S in 8's to 20's in even lengths

Port Orford Cedar is a highly sought after decking material and has the following characteristics:

- Known to be the strongest cedar product available
- One of the most durable cedar decking materials great for high foot traffic
- Light color almost looks white to light yellow in color
- Has natural decky resistance which is great for wet, damp climates.
- Remains smooth with little to no raised grain or splintering
- Dense wood product - will need a good penetrating semi-transparent stain

We stock the following Port Orford Cedar products and can help you with your special requirements. Please contact us for further information.
