

No other North American softwood possesses the combination of elegance and long-lasting performance than California Redwood. Its natural beauty and durability are unsurpassed by any other commercially harvested specie. Most of our old-growth Redwood forests have been set aside for future generations and are protected by state and federal regulations. The remaining commercial forests are strictly managed for optimum renewability and sustainability. Redwood is manufactured into hundreds of high-quality products ranging from finish patterns for interior use to a large variety of exterior siding and decking products. Redwood is truly a top performer for outdoor use.

Early west coast settlers have used Redwood since the California gold rush began in 1849 and today's architects, professional builders and do-it-yourselfers value it for the following characteristics:

- Redwood, when kiln-dried or air-seasoned, is both strong and light in weight.
- It is easy to cut, rip, mill and sand with regular woodworking tools.
- Kiln-dried or air-seasoned Redwood is very stable and highly resistant to warp, cup, twist and splits.
- Redwood contains no pitch or resins.
- Dry Redwood is easy to paint, stain and finish.
- Redwood, especially the All-Heart grade, is naturally resistant to rot, decay and insect damage. Chemically free, it is safe for adults, children and pets.
- It is an excellent choice for exterior siding, decking, trellises and gazebos. All-Heart Redwood can last a lifetime with proper care.
- Commercial Redwood forests are managed for sustainability.
- The natural beauty and warmth of Redwood is unsurpassed.

We stock the following Redwood products and can help you with your special requirements. Please contact us for further information.
