HEMLOCK VERTICAL GRAIN ROUGH SAWN

Western hemlock is milled into many different products and is favored by craftsmen for the high quality of its finish lumber. Clear lumber milled from hemlock is fine textured, straight-grained, free of pitch and it splinters less than other softwood clears. These characteristics make it an excellent wood for molding, millwork and a large variety of interior paneling products.

The characteristics of hemlock make it an excellent choice for interior finish materials.

- It is a kiln-dried product with excellent stability. Warp, cup, and twist is minimal when properly conditioned and acclimated.
- Hemlock contains no pitch.
- Resistant to splitting and splintering.
- It is strong, stiff, fine textured and straight-grained.
- Hemlock finish is easy to cut, rip, mill and sand. It is highly workable.
- Naturally light in color, hemlock is easy to paint, stain and finish.
- Your choice of vertical-grain or mixed-grain products.

We stock the following Hemlock products and can help you with your special requirements. Please contact us for further information.

PATTERN LIST
