

Western hemlock is milled into many different products and is favored by craftsmen for the high quality of its finish lumber. Clear lumber milled from hemlock is fine textured, straight-grained, free of pitch and it splinters less than other softwood clears. These characteristics make it an excellent wood for molding, millwork and a large variety of interior paneling products.

The characteristics of hemlock make it an excellent choice for interior finish materials.

- It is a kiln-dried product with excellent stability. Warp, cup, and twist is minimal when properly conditioned and acclimated.
 - Hemlock contains no pitch.
 - Resistant to splitting and splintering.
- It is strong, stiff, fine textured and straight-grained.
 - Hemlock finish is easy to cut, rip, mill and sand. It is highly workable.
 - Naturally light in color, hemlock is easy to paint, stain and finish.
 - Your choice of vertical-grain or mixed-grain products.

We stock the following Hemlock products and can help you with your special requirements. Please contact us for further information.
